

is a next generation MAP. Bioactive MAP is an activated MAP with patent technology of Niha Corp USA. It is coated with activating agents, a blend of Acclimatized Beneficial Microbes consortium, Microbes Growth promoting Organic material blend. This Bioactivation ensures more nutrient availability to plant and less fixation of P_2O_5 in soil. Giving significant higher yield vs classical MAP. Classical MAP is manufactured by reacting phosphoric acid and ammonia and contains one ammonia molecules. MAP has 4 pH and is ideal multi nutrient fertilizer for alkaline soils.

It is an ideal basal application product for normal soils to supplement Nitrogen and Phosphorous. Bioactivation of MAP with beneficial microbes and organic emulsion of activating agent makes it more efficient vs classical MAP. Its microbial consortium develops a synergetic relation with plant and ensures: -

- Healthy plant
- Vigorous root system
- Increased chlorophyll

Resultantly 10-15% more availability of nutrients and higher yield.
